

AEGIS Project – Team Roles & Responsibilities Agreement

This document defines ownership, responsibilities, deliverables, and accountability for the AEGIS (Autonomous Multi-Agent Intelligence War Room) project. The purpose is to avoid confusion, prevent overlap, and ensure both team members have clearly defined contributions throughout development.

Team Structure

Shlok Noval – Lead AI Architect & Intelligence Systems Engineer

Primary Ownership: Intelligence Core Responsibilities: • LangGraph Orchestrator and workflow design • Multi-Agent System architecture • Recon Agent development • Financial Agent development • Geopolitical Agent development • Synthesis Agent development • ChromaDB and Vector RAG implementation • Neo4j and GraphRAG implementation • Devil's Advocate Agent • Evidence validation logic • Confidence Engine and trust scoring • AI architecture documentation
Deliverables: • agents/ • retrieval/ • graph/ • validation/ • confidence/ Review/Viva Ownership: • Multi-Agent Systems • LangGraph • RAG and GraphRAG • Neo4j • Confidence Engine • Adversarial Validation

Aditya – Lead Platform Engineer & Full-Stack Systems Developer

Primary Ownership: Product, Platform, and Infrastructure Responsibilities: • React/Next.js frontend • Dashboard implementation • Knowledge Graph Viewer UI • Risk Dashboard UI • Strategic Briefing UI • FastAPI routes and backend APIs • PostgreSQL integration • Authentication and authorization • WebSocket streaming • Docker and deployment • GitHub workflows • Hosting and infrastructure
Deliverables: • frontend/ • api/ • database/ • deployment/ Review/Viva Ownership: • Frontend Architecture • API Design • Database Design • WebSockets • Deployment • Authentication • Infrastructure

Shared Responsibilities

Both team members are jointly responsible for: • Weekly integration and testing • GitHub repository maintenance • Documentation updates • PPT preparation • Demo preparation • Bug fixing and system validation • Final report writing

Project Ownership Rules

1. Shlok has final technical authority over AI architecture decisions. 2. Aditya has final technical authority over platform and deployment decisions. 3. Major architecture changes require mutual approval. 4. Code reviews should be performed before merging major features. 5. Weekly progress review should be conducted. 6. Both members must understand the complete project before final viva.

Development Roadmap

Phase 1: • Basic RAG • ChromaDB • FastAPI Setup • React Setup Phase 2: • Neo4j Integration • GraphRAG • Dashboard Development Phase 3: • Multi-Agent System • LangGraph Orchestration Phase 4: • Devil's Advocate • Evidence Validation • Confidence Engine Phase 5: • Testing • Optimization • Final Demo

Goal

The objective of this division is to ensure balanced contributions, clear accountability, faster development, and a strong final-year project outcome. Both members remain contributors to the overall AEGIS platform while maintaining ownership of their designated subsystems.
